Important notes: wall composition / assembly instruction	64

Neglected for too long, the bathroom finally gets the attention it deserves. As a wellness oasis, retreat and hotspot of the home, the lifestyle bathroom provides flowing transitions to the bedroom or living room. This is achieved by clever design features. Inspired by stylish city lofts, glass units or half-height walls offer interesting perspectives and allow exciting architectural links. This opens up the room and provides a natural transition from the bed to the bathroom. Continuous flooring enhances the loft character. Wooden floors create a warm and comfortable atmosphere. A balanced colour choice in the bathroom and bedroom ensures a cosy overall look whilst adding interesting accents. The lifestyle bathroom makes a creative and individual impact, thus delivering an entirely new ambience in the room.

A lifestyle bathroom focuses on cosiness and comfort. Armchairs, side tables and pictures are therefore moving into the bathroom. Add some plants and generously draped curtains to create a feel-good space. Bare feet sink into soft rugs, loungers invite you to relax and the bathtub takes centre stage in the middle of the room – this is how you design your private spa at home. Listen to your favourite music through the speakers, dim the lighting via the smart home settings and you will create a perfect lifestyle bathroom.

- low in emissions
- wood from sustainable forestry
- safe to use in the home

Dimensional sketches for general  
assembly and connections:  
see pages **26-30 (GENTIS)** resp. **56-60 (TETRIM)**

## Important general notes

### Room climate and care

hülsta bathroom furniture is designed for the private home and therefore suitable for a bathroom climate that is typical in a standard household. If the bathroom is sufficiently ventilated during or after taking a shower or a bath so that the high level of humidity that temporarily occurs can be reduced, furniture will not be negatively affected. Otherwise genuine wood adapts to changing levels of moisture and temperature in nature by warping - and of course this effect is in no way desirable in the case of furniture. Large amounts of absorbed water caused by accumulation or condensation that affect wooden furniture must be avoided at all costs and removed by wiping down with a smooth dry cloth. This also prevents mould and/or swelling of the wood. Otherwise furniture might warp or splinter. Generally wooden furniture should only be subjected to slight deviations in temperature and humidity. Because all our furniture surfaces are treated with our high-quality lacquers and therefore protected, they can easily be cleaned with a light damp cloth. Nevertheless, any soiling should be removed immediately.

Further information regarding care and our guarantee can be found in the guarantee passport which is provided with the furniture.

### Assembly

All assembly work and electrical and plumbing installations should be carried out by qualified personnel.

The top rim height of 90.0 cm stated for fitting washbasins is only a recommendation and also depends on individual factors such as a person's height. The heights stated are measured from the top surface of the flooring.

Additional sealing of the sides of units, cover surfaces or washbasin rims is always necessary in the case of integrated washbasins and washbasins which have fitted lower cupboards or which adjoin walls. Silicone joints must be regularly maintained and renewed after a period of years if necessary. Please note: only use neutral, solvent-free, silicon-based sealing compounds suitable for bathrooms.

Drainage pipes should not be tightened too firmly and the corresponding rubber washers or suitable sealants should always be used. Otherwise there is a danger of tearing due to tension.

Further information regarding assembly can be found in the assembly instructions which are supplied with the furniture.

### Electrical fittings

All electrical installations must be carried out by qualified personnel. Electrical installations may only be carried out by qualified personnel and in line with DIN 57100 / VDE 0100 - 701 norms. Please note: Installation area for furniture with electrical components according to DIN VDE 0100 Teil 701. This furniture with integrated electrical components is only approved for fitting outside of installation areas 0, 1 and 2. If it is fitted within areas 0, 1 and 2 there is a danger of electrical shock. Electrical units must have a minimum distance of 60 cm to the outer rim of a bathtub and/or shower unit. Safety instructions and standards of the respective countries must be observed.

LED lamps must be connected to the mains via on-site electrical connections (on top of or beneath plastering) or via electrical sockets. Please enquire about these electrical fittings before contracts are signed. Mains connections can be carried out anywhere on the rear side of units with electrical fittings.

Space available for connections behind individual units:

GENTIS: wall mirrors: 32 mm, mirror cupboards: 51 mm

TETRIM: wall mirrors: 27 mm, mirror cupboards: 29 mm

A remote control unit is essential for the operation of the LED lamps (against a surcharge).

### Washbasin fittings

hülsta bathroom washbasins do not have any fittings. These must be ordered from specialised dealers.

# Range introduction

## Maximum loads

**Max. load:**  
Max. load of wooden and glass shelves (up to 70.4 cm width) as well as drawers: 25 kg  
Max. load of wooden and glass shelves (between 70.4 and 105.6 cm width): 15 kg  
Max. load of wooden and glass shelves (from 105.6 cm width): 10 kg  
Max. load of cover shelves: 35 kg per metre length for floor units.  
Please also note any maximum loads which may be stated in the type list for the individual units!

## Wall units

The wall units can only be fitted on absolutely solid walls. Light masonry is not suitable for this purpose.  
For each project please remember to leave a 2.0 cm gap at the top to be able to mount units.

## Labelling in type list drawings / assembly notes for wall units

**Labelling in type list drawings / assembly notes for wall units**  
The majority of units have two wall mounting points (= number of base plates), if these are to be fitted as wall units. This is not explicitly mentioned in the type list. If a different number of wall mounting points (= base plates) is required, this is marked in the drawings in the type list with numbers in black boxes. Please be sure to note here the information and notes in the "Wall composition" chapter!

3  
4

## Notes on delivery

**Notes on delivery:**  
The majority of the units are delivered standard as **fully connected units (glued)** so that the carcass **cannot be disassembled**. There are however some **exceptions** to this rule:

Some carcasses are delivered as complete units but can be **disassembled into individual sections** in the final customer's home. These types are marked with a **1** in the type list.

Some carcasses are delivered **in individual sections** because of their size. These types are marked with a **2** in the type list.

The fronts with the number **2** are delivered separately and can therefore always be (dis-) assembled.

## Wall fitting

**Important notes:** Generally speaking, you as a dealer/qualified fitter are responsible for the correct wall mounting of the units. That is why wall mounting should only be carried out by properly trained and qualified fitters. hülsta supplies materials for mounting units on walls for nearly all the units and which should be used for safety and for constructional reasons. The assembly materials supplied by hülsta (plugs, screws) are only suitable for fitting components on to concrete in firmness class C12/15.  
For other materials (please see separate materials table in the wall composition chapter) we provide you with an assembly mortar set as an extra order. Please note that this assembly mortar set is also only suitable for the materials listed in the materials table. If walls are made up of other materials (e.g. plastered or lighter wall materials), one should use another method of mounting better suited to the load on site. Please note that if the units are not mounted properly on the wall, there is a risk of the units falling down or tipping over – especially when alternative mounting materials acquired on site have been used. For the reasons stated above it is absolutely essential to enquire about the composition of any walls before signing any contracts.

## Washbasins materials

The **washbasins** are available in a variety of materials: the top washbasins from Gentis and Tetrim, optionally round or rectangular in form, are available in a ceramic material, the carcass washbasins from Tetrim are made of Corian® and from Gentis they are made of Corian® or Optiwhite glass.

### Ceramic

Ceramic is a material with endless possibilities, whilst also being very flexible for processing. For the hülsta bathroom range, this material used in its original form for thousands of years meets the technical possibilities of the 21st century.

The base mass for ceramic consists of the natural materials clay, kaolin, quartz and feldspar. Quartz, chalk, feldspar and the mineral rock dolomite are mixed to create the glaze. During the manufacturing process of the base mass, the outstanding properties of the material are optimised, cast in different shapes and baked at more than 1,200° degrees. The result is a material that sets new benchmarks in terms of durability, surface and colour fastness as well as stain resistance.

The hygienically smooth surface glazing is abrasion and scratch resistant, easy to care for and therefore ideal for the health sector. Ceramic is skin-friendly, heat resistant and lightfast. Surface finishing ensures that washbasins remain beautiful and clean for a long time – the finishing is carried out using only materials that are physiologically harmless.

### Corian®

Corian® is a high-performant composite material for architecture and design offering versatility, functionality and durability for use in living areas. The material is available as sheets or moulded parts and can be manufactured into almost any shape using conventional tools. Corian® is a solid, non-porous, homogenous surface material consisting of approx. 1/3 acrylic resin and approx. 2/3 natural materials.

Liquids and dirt will not penetrate the non-porous Corian® material. It features a smooth joint-less look. When cleaned properly, mould and bacteria formation is prevented. However, certain chemicals stain, colour or damage the surface. These include strong acids (such as concentrated sulphuric acid), ketones (such as acetone), solvents containing chlorine or strong solvent combinations (such as paint strippers).

Corian® can often be unobtrusively repaired, which is an added value. Small cuts, scratches and stains can be removed using standard, lightly abrasive cleaners and a scouring pad or possibly sandpaper. Burn marks can also be removed in this way.

### Optiwhite glass

Clear or matt, almost invisible or lacquered in colour, transparent, stained or opaque – glass is amazingly versatile. It adds elegant accents next to wooden or lacquered surfaces. Combined with lighting, it creates a beautiful atmosphere. Because of its hardness and resistance, glass is also a wonderful material, which – due to its high stability, durability as well as its flowing shapes – provides an elegant design feature as a washbasin.

The basis for all glass surfaces is transparent float glass, which features a shiny surface. If the surface is roughened using special processes, it has a matt white effect and is called satinized. Satinizing, lacquering or foiling changes the appearance of glass. In some areas – as in the bathroom area – we use glass with an uncompromising purity that is called extra-white glass or Optiwhite glass, here extra-white glass with a glossy top and a white or coloured rear-lacquered underside.

# Geberit Clou System

**Geberit sanitary products for washbasins from the hülsta bathroom ranges ensure safe and reliable operation and a stylish look.**

The drain system is characterised by the fact that the water - if there is a risk of overflowing - does not have to drain through an additional, visible overflow within the washbasin. Sophisticated technology does not require an unsightly overflow for the water to drain away, thus offering a much cleaner and more beautiful design of the washbasin.

#### **Functioning**

With an open sink plug, the flowing water runs into the drainpipe and passes the odour trap. If you want to fill the washbasin with water, close the pop-up plug to seal the washbasin. As soon as the water reaches the overflow limit, the water then runs via the drain into the two-part overflow pipe and into the drainpipe via the odour trap. This system works with a seal system that is attached to the plug. It rises when filling the washbasin and also prevents any dirty water from flowing from the overflow pipe into the washbasin. In line with the principle of communicating pipes (i.e. containers open at the top and connected at the bottom) the water is evenly stored.

## Drain and overflow systems

### Open sink plug

The water runs directly through the plughole via the odour trap into the drainpipe.

### Closed sink plug

Using the pop-up mechanism closes the sink plug. The water is stored evenly in the ceramic as well as in the overflow according to the principle of communicating pipes.

### Fill-stop

The patented seal system, which is attached to the pop-up plug, rises when filling the washbasin, thus preventing a backflow of the dirty water from the overflow pipe into the washbasin.

### Overflow situation

If the water level reaches the overflow level of the overflow channel, the water then flows into the two-part overflow channel via the odour trap into the drainpipe. Opening the sink valve is carried out by using the lever system. The water drains away unhindered.

# GENTIS BATHROOM

## MANY OPTIONS – ONE DESIGN

Individual bathrooms. The Gentis design allows the combination of many units. Lower cupboards with carcass washbasin or top washbasin plus matching wall mirrors or mirror cupboards with one or three doors. The accent wall units, accent system shelves with storage or towel holders are also available in several sizes and different materials. This versatility provides a personalised overall look.

### 01

Combination of three-door mirror cupboard with lighting and lacquered lower cupboard with carcass washbasin.

### 02

Accent wall unit available in three sizes and three wood versions.

### 03

Accent system shelf in three possible wood versions and three different lengths with chrome-plated stainless steel fittings and storage trays.

01

02

03

04

A choice of round or rectangular top washbasins.

05

Combination with a lower cupboard and two top washbasins.

06

Lower cupboards in two different heights and washbasin combinations.

07

Lit or un-lit wall mirrors and mirror cupboards with one or three doors.

04

All units are available with rear-lighting in warm or cold white.

05

06

07

## Radio remote control with change of colour temperature

A 4-channel remote control unit is essential for the operation of the LED lamps. Several lamps can be operated with each of the 4 channels. All 4 channels can be dimmed separately at the push of a button. The colour temperature of all 4 channels can be set to any level from cold white (approx. 6500 kelvin = the basic setting of the LED lamps) to warm white (approx. 2700 kelvin). It is also possible to switch all channels on and off simultaneously with the "all on" or "all off" buttons. Up to 4 transmitters can operate as many receivers as required. The remote control unit consists of one transmitter and one receiver. If several receivers are required because of the arrangement of the units, these and the corresponding cables are provided ex-works (no surcharge).

Labelling in type list drawings /  
 assembly notes for wall units

**Labelling in type list drawings /  
 assembly notes for wall units**  
 The majority of units have two wall mounting points (= number of base plates), if these are to be fitted as wall units. This is not explicitly mentioned in the type list. If a different number of wall mounting points (= base plates) is required, this is marked in the drawings in the type list with numbers in black boxes. Please be sure to note here the information and notes in the "Wall composition" chapter!

Notes on delivery

3  
 4

**Notes on delivery:**  
 The majority of the units are delivered standard as **fully connected units (glued)** so that the carcass **cannot be disassembled**. There are however some **exceptions** to this rule:

Some carcasses are delivered as complete units but can be **disassembled into individual sections** in the final customer's home. These types are marked with a **1** in the type list.

Some carcasses are delivered **in individual sections** because of their size. These types are marked with a **2** in the type list.

The fronts with the number **2** are delivered separately and can therefore always be (dis-) assembled.

# TETRIM BATHROOM

## INCREDIBLY VERSATILE

Tailor-made design for every bathroom. Tetrim combines versatile units to create a balanced overall look - irrespective of the size of the bathroom. Lower washbasin cupboards with open compartments and one or two doors make the most of the available space and create a spacious look. Wall units in a typical L-shape can be fitted horizontally or vertically. Add an carcass or top washbasin, displayed to great effect with accented lighting. All of this is possible with Tetrim.

01

02

01

Wall units with open compartment and with one or two doors.

02

Wall units in characteristic L-shape.

03

Combination of a three-door mirror cupboard with carcass washbasin or rear-lit wall mirror with top washbasin.

04

Multiple-door mirror cupboard and wall mirror, rear-lit upon request.

Further combinations and possibilities can be found at [huelsta.com/tetrim-bad](http://huelsta.com/tetrim-bad)

03

04

## Radio remote control with change of colour temperature

A 4-channel remote control unit is essential for the operation of the LED lamps. Several lamps can be operated with each of the 4 channels. All 4 channels can be dimmed separately at the push of a button. The colour temperature of all 4 channels can be set to any level from cold white (approx. 6500 kelvin = the basic setting of the LED lamps) to warm white (approx. 2700 kelvin). It is also possible to switch all channels on and off simultaneously with the "all on" or "all off" buttons. Up to 4 transmitters can operate as many receivers as required. The remote control unit consists of one transmitter and one receiver. If several receivers are required because of the arrangement of the units, these and the corresponding cables are provided ex-works (no surcharge).

#### Radio remote control with change of colour temperature

## Radio remote control with change of colour temperature

A 4-channel remote control unit is essential for the operation of the LED lamps. Several lamps can be operated with each of the 4 channels. All 4 channels can be dimmed separately at the push of a button. The colour temperature of all 4 channels can be set to any level from cold white (approx. 6500 kelvin = the basic setting of the LED lamps) to warm white (approx. 2700 kelvin). It is also possible to switch all channels on and off simultaneously with the "all on" or "all off" buttons. Up to 4 transmitters can operate as many receivers as required. The remote control unit consists of one transmitter and one receiver. If several receivers are required because of the arrangement of the units, these and the corresponding cables are provided ex-works (no surcharge).

**The following points must be noted with the radio remote control unit:**

- The receiver must be positioned behind a rear wall.
- The total wattage power of all lamps included per receiver must not exceed 30 W.
- 4 channels = 4 light groups
- 1 light group = x lights
- All lamps within a light group can be dimmed to the same brightness.
- The same light colour can be set for all lamps in all the light groups. This light colour is then valid for all the lamps.
- The remote control unit is not suitable for equipment operating on 110 V.

**Please be sure to note the operating and programming instructions!**

#### 4-channel radio remote control with change of color temperature

**4-channel radio remote control  
with change of color temperature**

type	2119	-
------	------	---

### Examples of use (schematic diagrams)

#### Example 1

##### Lights inside a unit

Channel 1 operates (and dims) all the lights in light group 1, i.e. the top LED lamp on the mirror cupboard

Channel 2 operates (and dims) all the lights in light group 2, i.e. the LED lamps on the front and rear side of the mirror cupboard

Channel 3 operates (and dims) all the lights in light group 3, i.e. the LED lamp behind the rear wall panel

Channel 4 operates (and dims) all the lights in light group 4, i.e. the LED lamp for the functional frame behind the lower washbasin cupboard

##### Notes:

The total wattage power of all lamps included per receiver must not exceed 30 W. The same light colour can be set for all lamps in all the light groups. This light colour is then valid for all the lamps.

#### Example 2

##### Lights in units set apart

Channel 1 operates (and dims) all the lights in light group 1, i.e. the top LED lamp on the wall mirror

Channel 2 operates (and dims) all the lights in light group 2, i.e. the LED lamp behind the accent system shelf

Channel 3 operates (and dims) all the lights in light group 3, i.e. the LED lamp for the functional frame behind the accent wall unit

Channel 4 operates (and dims) all the lights in light group 4, i.e. the LED lamp for the functional frame behind the lower washbasin cupboard

##### Notes:

The total wattage power of all lamps included per receiver must not exceed 30 W. The same light colour can be set for all lamps in all the light groups. This light colour is then valid for all the lamps.

#### Example 3

##### Operating lamps using light switches

After the desired light scene has been selected with the remote control (light colour and brightness, see example 2), it is possible to operate all the LED lamps using one (or more) light switches. All the LED lamps are switched on or off simultaneously with the light switch(es). Only the LED lamps whose sockets are connected on site to the same switch circuit can be switched on or off together.

Important notes

Wall composition / assembly instruction

**Important notes:**  
The composition of walls must be ascertained before concluding a contract and be checked by a qualified fitter before assembly takes place.

Assembly may only be carried out by a qualified fitter under careful observation of the assembly instructions.

The plastic Rawl plugs supplied by hülsta as a standard set are only suitable for concrete  $\geq$  C12/15, if the wall composition and compression strength corresponds to the table below. Under no circumstances must a unit be assembled on light masonry.

Furthermore, we provide a mounting set with assembly mortar for the types of walls listed below (see assembly mortar set below). Again, assembly must be carried out by a qualified fitter under careful observation of the wall composition and assembly instruction. The compression strength levels stated below must be met under all circumstances.

Materials table  
with a description of which sets are to be used with the following types of walls:

Standard set	Assembly mortar set only suitable for the materials stated below!			
Concrete C12/15 Compression strength $\geq$ 15 N/mm <sup>2</sup> 		Building bricks Mz 12 Compression strength $\geq$ 12 N/mm <sup>2</sup>		Solid blocks of light concrete V2 Compression strength $\geq$ 2 N/mm <sup>2</sup>
		Limestone blocks KS 12 Compression strength $\geq$ 12 N/mm <sup>2</sup>		Perforated blocks of light concrete Hbl 2 Compression strength $\geq$ 2 N/mm <sup>2</sup>
		Perforated sand lime bricks KSL12 Compression strength $\geq$ 12 N/mm <sup>2</sup>		Aerated concrete PP2 Compression strength $\geq$ 2 N/mm <sup>2</sup>
		Vertically perforated bricks HLz 12 Compression strength $\geq$ 12 N/mm <sup>2</sup> Bulk density $\geq$ 1.0 kg/dm <sup>3</sup>		

A different and more suitable type of mounting must be chosen by a qualified fitter in all other cases. hülsta cannot accept any responsibility for the choice of any other types of mounting! Please note that if the units are not mounted properly on the wall, there is a risk of the units falling down or tipping over – especially when alternative mounting materials acquired on site have been used. Generally speaking, you as a dealer/qualified fitter are responsible for the correct wall mounting of the units.

Mounting sets

**Labelling in type list drawings / assembly notes for wall units**  
The majority of units have two wall mounting points (= number of support boards), if these are to be fitted as wall units. This is not explicitly mentioned in the type list. If a different number of wall mounting points (= support boards) is required, this is marked in the drawings in the type list with numbers in black boxes. Every support board requires four mounting screws.

**3** = 3 support boards  
**4** = 4 support boards, etc.

One **assembly mortar set** is sufficient for up to a maximum of 3 support boards or 4 wall side-panels.

**Important note:** Depending on the composition of the wall (see wall types illustrated above), assembly must be carried out using the special assembly mortar set and a standard trade mastic tool which are the basic essentials for safe and clean workmanship.

<b>Standard set</b> The standard set consists of 4 plastic Rawl plugs and 4 mounting screws and is sufficient for 1 support board. The standard sets are included in the packet of fittings to match the number of support boards.		
<b>Assembly mortar set for up to a maximum of 3 support boards consisting of:</b>  9x injection retaining sleeve 9x screw-in sleeve 1x injection cartridge 2x static mixer 1x assembly instructions  Please use the mounting screws from the standard set (supplied free of charge).	<b>Example of order:</b> <ul style="list-style-type: none"><li>Add up number of support boards for all existing unit types</li><li>Divide the sum by “3”</li><li>Round up the result to a full number</li></ul> = Number of assembly mortar sets required	<b>M2</b> -
